Question 18 of 21

A first version of Skill Swap includes search, profiles, matching, and session scheduling. Why is this a useful scope decision?

- ☐ It adds every possible feature as early as possible
- ☐ It removes the need to identify any users
- ☐ It keeps the design focused on the core problem
- ☐ It guarantees the final architecture will be correct

Question 20 of 21

A design team wants to add a five-second animated splash screen before the Skill Swap home screen because it looks impressive. A team member objects, saying learners come to find a mentor, not to watch an animation. The objecting team member is applying:

☐ User-centered thinking

☐ Wireframe fidelity principles

☐ UI hierarchy rules

☐ UX feedback standards

The Product

MediTrack is a platform for small neighbourhood clinics to manage doctor appointments.

Right now, patients book appointments by calling the clinic. They wait on hold, cannot see which slots are free, and often forget when their appointment is. Doctors have no organised view of their day — they rely on a paper register the front desk keeps, and they cannot easily look up a returning patient's past visits. The clinic administrator manages everything by hand: adding doctors to the paper rota, juggling cancellations, and having no clinic-wide picture of how busy the clinic is or how many appointments get cancelled.

MediTrack solves this. It gives patients one place to find a doctor, see free slots, and book or cancel an appointment. It gives doctors an organised view of their schedule, a way to set when they are available, and access to a patient's visit history. It gives the clinic administrator the tools to manage doctor profiles and see clinic-wide appointment activity.

The platform is focused on three things: **appointment booking for patients**, **schedule and visit management for doctors**, and **clinic administration**. It is **not** a video-consultation (telemedicine) app, **not** a pharmacy or medicine-ordering store, and **not** a full hospital records system. Stay within this scope when writing your requirements.

What You Need to Submit

Write a **Product Requirements Document** for MediTrack.

Instructions

What You Need to Submit

Write a **Product Requirements Document** for MediTrack.

Submit it as a **single PDF file** with the following four sections in this exact order, using these exact headings:

Problem Statement

Write one to two sentences. Name the pain that exists and the people who experience it.

Do not describe the product. Do not list features. Do not mention technology.

Product Objective

Write one to two sentences. Describe what MediTrack should enable – as an outcome for users, not a list of what the platform will include.

Do not mention technology, frameworks, or implementation details.

17

18

Write **at least two requirements for each user type**. Each requirement must describe something a specific user can do in the system — not a technical decision, not a feature label, not a vague quality.

Rules

- No technology choices anywhere in the document. No database names, no framework names, no server or infrastructure references.
- No non-functional requirements. Speed, security, reliability, and scalability are *qualities* of the system, not user actions — leave them out of this document.
- Every requirement must be traceable to the objective. If a requirement does not help achieve what you wrote in the objective, remove it.
- No feature labels. "Add search" is not a requirement. "The system must allow patients to search for a doctor by name" is a requirement.

Submission Format

- Four sections in order: Problem Statement, Product Objective, Target Users, Functional Requirements
- Numbered list for functional requirements — not bullet points, not prose
- One to two pages. A good PRD is concise.

Question 2 of 21

A wireframe of the Skill Swap search screen includes the exact brand terracotta color on the Book button and real mentor photographs. What problem does this cause?

- ☐ The wireframe becomes too accurate and will confuse developers
- ☐ Typography decisions get locked in too early
- ☐ Layout decisions become expensive to change once visual work exists
- ☐ The fidelity level jumps from hi-fi to lo-fi unexpectedly

Question 4 of 21

A Skill Swap module contains: mentor search logic, session booking logic, reminder email templates, user profile storage, and payment processing. A developer says this module has low cohesion. Are they correct?

☐ Yes. The module contains unrelated responsibilities that do not belong together.

☐ No. Having many features in one module improves efficiency.

☐ No. Low cohesion only applies to interfaces, not to module internals.

☐ Yes, but only because it contains payment logic.

Question 8 of 21

A design team is in their first conversation about what sections should appear on the mentor profile screen. No structure has been agreed yet. Which wireframe fidelity level is most appropriate?

☐ Hi-fi mockup, to show the full vision clearly

☐ Mid-fi wireframe, to include placeholder text and final fonts

☐ Lo-fi wireframe, to discuss structure cheaply and quickly

☐ A finished screen, so stakeholders can give visual feedback
