

DRY-RUN GUIDE | try2.py

Source: Python\1st_Belt\try2.py

CORE BEHAVIOR

Repeatedly reverses the entered string to test palindromicity, and stops on the first non-palindrome.

REPRESENTATIVE INPUT

Enter 'aba', then 'ab'.

STEP TRACE

'aba' equals its reverse, so repeat. 'ab' reverses to 'ba', so print the negative result and break.

EXPECTED OUTPUT / RETURN

'Character is a palindrome', then 'Character is not a palindrome' (and prompts).

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\1st_Belt\try2.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Solve the input-processing challenge implemented in this program.
002 | # Add your solution here.
003 |
004 | x=input()
005 | if x in'QWERTYUIOPASDFGHJKLZXCVBNM':
006 |     print("Upper case")
007 | elif x in 'qwertyuiopasdfghjklzxcvbnm':
008 |     print('Lower case')
009 | elif x in '1234567890':
010 |     print('Digit')
011 | else:
012 |     print("Special case")
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
