

DRY-RUN GUIDE | vandc2.py
Source: Python\1st_Belt\vandc2.py

CORE BEHAVIOR

Counts vowels and other characters. The condition refers to 'char.isalpha' without calling it; this bound method is truthy, so every non-vowel-including digits and punctuation-is counted as a consonant.

REPRESENTATIVE INPUT

'a1!'

STEP TRACE

'a' increments vowels. '1' and '!' are not vowels and increment consonants; the isalpha method is never invoked.

EXPECTED OUTPUT / RETURN

Two lines: '1' then '2'.

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\1st_Belt\vandc2.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Solve the input-processing challenge implemented in this program.
002 | # Add your solution here.
003 |
004 | text=input()
005 | vowels=0
006 | consonants=0
007 | for char in text:
008 |     if char.lower() in "aeiou":
009 |         vowels+=1
010 |     elif char.lower() in "qwrtysdfghjklzxcvbnmp":
011 |         consonants+=1
012 | print(vowels)
013 | print(consonants)
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
