

DRY-RUN GUIDE | worksheet-4.py
Source: Python\1st_Belt\worksheet-4.py

CORE BEHAVIOR

Calculates a weighted average (40%, 30%, 30%) for three marks and assigns A/B/C/F using descending thresholds.

REPRESENTATIVE INPUT

Marks '90', '80', '70'.

STEP TRACE

Weighted value = $36+24+21=81.00$. It is below 85 and at least 70, so choose grade B.

EXPECTED OUTPUT / RETURN

'Weighted Average: 81.00'; 'Grade: B'.

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\1st_Belt\worksheet-4.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Solve the worksheet problem implemented in this program.
```

```
002 | # Add your solution here.
```

```
003 |
```

```
004 | sub1 = float(input("Enter Subject 1 marks: "))
```

```
005 | sub2 = float(input("Enter Subject 2 marks: "))
```

```
006 | sub3 = float(input("Enter Subject 3 marks: "))
```

```
007 |
```

```
008 | weighted_avg = (sub1 * 0.40) + (sub2 * 0.30) + (sub3 * 0.30)
```

```
009 |
```

```
010 | if weighted_avg >= 85:
```

```
011 |     grade = 'A'
```

```
012 | elif weighted_avg >= 70:
```

```
013 |     grade = 'B'
```

```
014 | elif weighted_avg >= 50:
```

```
015 |     grade = 'C'
```

```
016 | else:
```

```
017 |     grade = 'F'
```

```
018 |
```

```
019 | print(f"\nWeighted Average: {weighted_avg:.2f}")
```

```
020 | print(f"Grade: {grade}")
```

```
021 |
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
