

DRY-RUN GUIDE | prefix.py

Source: Python\2nd_Belt\prefix.py

CORE BEHAVIOR

Reads a string and candidate prefix, compares the start slice of the string with the prefix, and prints Yes/No.

REPRESENTATIVE INPUT

s='helloWorld', p='hello'.

STEP TRACE

s[:len(p)] is 'hello', equal to p, so the if branch runs.

EXPECTED OUTPUT / RETURN

'Yes'

ACTUAL SOURCE EXCERPT

Verbatim excerpt; line numbers refer to the original source, which was not modified.

001 | # Question: Compute the prefix sum of each element in the array.

002 | # Add your solution here.

003 |

004 | s = input().strip()

005 | p = input().strip()

006 |

007 | if s[:len(p)] == p:

008 | print("Yes")

009 | else:

010 | print("No")

011 |

DRY-RUN NOTE

Trace describes actual source behavior, including errors where applicable.
