

DRY-RUN GUIDE | frequency.py
Source: Python\3rd_Belt\frequency.py

CORE BEHAVIOR

Lowercases input and counts each character in a dictionary.

REPRESENTATIVE INPUT

'Hello'

STEP TRACE

Process h,e,l,l,o; create each count at 1 and increment second l to 2.

EXPECTED OUTPUT / RETURN

'{'h': 1, 'e': 1, 'l': 2, 'o': 1}'

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\3rd_Belt\frequency.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Count how many times each character appears in a string.  
002 | # Add your solution here.  
003 |  
004 | str = input()  
005 | str = str.lower()  
006 | freq = {}  
007 | for i in str:  
008 |     if i in freq:  
009 |         freq[i] += 1  
010 |     else:  
011 |         freq[i] = 1  
012 | print(freq)
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
