

DRY-RUN GUIDE | ss232.py

Source: Python\3rd\_Belt\ss232.py

#### CORE BEHAVIOR

Inserts a space at lowercase-to-uppercase boundaries (camel case separation).

#### REPRESENTATIVE INPUT

'helloWorld'

#### STEP TRACE

Copy 'hello'; before W, previous char is lowercase and W is uppercase, so insert a space; copy 'World'.

#### EXPECTED OUTPUT / RETURN

'hello World'

#### ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\3rd\_Belt\ss232.py; line numbers refer to the original file.  
No source was modified.

```
001 | # Question: Solve the given array/string challenge using the required logic.
```

```
002 | # Add your solution here.
```

```
003 |
```

```
004 | # Read the full string and the word to remove
```

```
005 | S = input()
```

```
006 | W = input()
```

```
007 |
```

```
008 | len_S = len(S)
```

```
009 | len_W = len(W)
```

```
010 | found = False
```

```
011 |
```

```
012 | # Iterate through the string to find the first character match
```

```
013 | for i in range(len_S - len_W + 1):
```

```
014 |
```

```
015 |     # Check if the substring matches the word W
```

```
016 |     if S[i : i + len_W] == W:
```

```
017 |         # Reconstruct the string by skipping the matched word
```

```
018 |         print(S[:i] + S[i + len_W :])
```

```
019 |         found = True
```

```
020 |         break
```

```
021 | # If the word was not found in the string, print the original string
```

```
022 | if not found:
```

```
023 |     print(S)
```

```
024 |
```

#### DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
