

DRY-RUN GUIDE | 10_array_queue.py

Source: Python\dsa_solutions\10_array_queue.py

CORE BEHAVIOR

Queue operations follow first-in-first-out order.

REPRESENTATIVE INPUT

Enqueue 10,20; dequeue once.

STEP TRACE

Queue [10,20]; dequeue removes 10; queue becomes [20].

EXPECTED OUTPUT / RETURN

Dequeued 10; remaining [20].

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\dsa_solutions\10_array_queue.py; line numbers refer to the original file. No source was modified.

```
001 | import sys
002 | from collections import deque
003 |
004 |
005 | def main():
006 |     data = list(map(int, sys.stdin.read().split()))
007 |     if not data:
008 |         return
009 |     count = data[0]
010 |     queue = deque(data[1:1 + count])
011 |     output = []
012 |     while queue:
013 |         output.append(str(queue.popleft()))
014 |     print("\n".join(output))
015 |
016 |
017 | if __name__ == "__main__":
018 |     main()
019 |
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
