

DRY-RUN GUIDE | 06_calculate_age.js

Source: javascript\1st_belt\06_calculate_age.js

CORE BEHAVIOR

calculateAge subtracts birth year from present year and prints a sentence. Top-level code reads two whitespace-delimited values and parses integers.

REPRESENTATIVE INPUT / CALL

Input lines: 2024 and 2003.

STEP TRACE

calculateAge(2024,2003) computes 21 and interpolates it into the output string.

EXPECTED OUTPUT / RETURN

'You are 21 years old!'

ACTUAL SOURCE EXCERPT

Verbatim lines from the source; long lines wrap. Source files were not modified.

```
001 | // Question:
002 | // Write calculateAge(present_year, year_of_birth).
003 | // Calculate the age by subtracting year_of_birth from present_year,
004 | // then print: You are <age> years old!
005 | // Input is two lines: present year, then year of birth.
006 | // Example: 2024 and 2003 -> You are 21 years old!
007 |
008 | function calculateAge(present_year, year_of_birth) {
009 |     const age = present_year - year_of_birth;
010 |     console.log('You are ${age} years old!');
011 | }
012 |
013 | const fs = require("fs");
014 | const lines = fs.readFileSync(0, "utf8").trim().split(/\s+/);
015 | const present_year = parseInt(lines[0], 10);
016 | const year_of_birth = parseInt(lines[1], 10);
017 |
018 | calculateAge(present_year, year_of_birth);
019 |
```
