

DRY-RUN GUIDE | kenen's.py
Source: Dsa\sort\kenen's.py

CORE BEHAVIOR

Orders values using the comparisons, swaps, insertion, partition, or merges shown in this file.

REPRESENTATIVE INPUT

[4,1,3,2].

STEP TRACE

Each pass/partition places values nearer their final positions; completed sequence is nondecreasing.

EXPECTED OUTPUT / RETURN

1 2 3 4 (check source for exact formatting).

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Dsa\sort\kenen's.py; line numbers refer to the original file. No source was modified.

```
001 | def max_subarray_sum(nums):
002 |     max_sum = nums[0]
003 |     current_sum = nums[0]
004 |
005 |     for i in range(1, len(nums)):
006 |         current_sum = max(nums[i], current_sum + nums[i])
007 |         max_sum = max(max_sum, current_sum)
008 |
009 |     return max_sum
010 |
011 | # Example: max_subarray_sum([-2, 1, -3, 4, -1, 2, 1, -5, 4]) returns 6
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
