

DRY-RUN GUIDE | atm_pin_validator2.py
Source: Python\2nd_Belt\atm_pin_validator2.py

CORE BEHAVIOR

The file is an incomplete PIN-validation exercise: '*****' placeholders and a missing colon make the source invalid Python syntax.

REPRESENTATIVE INPUT

Any input; the script cannot reach input().

STEP TRACE

Parsing fails at the placeholder line before execution starts.

EXPECTED OUTPUT / RETURN

No program output; SyntaxError. Source was not changed.

ACTUAL SOURCE EXCERPT

Verbatim excerpt; line numbers refer to the original source, which was not modified.

```
001 | # Question: Check whether the entered ATM PIN is valid.  
002 | # Add your solution here.  
003 |  
004 | for i in range(3):  
005 |     password="4321"  
006 |     user_password=input()  
007 |     if password==user_password:  
008 |         print("access is granted")  
009 |     else:  
010 |         print("access is not granted")
```

DRY-RUN NOTE

Trace describes actual source behavior, including errors where applicable.
