

DRY-RUN GUIDE | dojo.py

Source: Python\2nd_Belt\dojo.py

CORE BEHAVIOR

Reads present and birth years, subtracts them in `calculate_age`, and prints the returned age.

REPRESENTATIVE INPUT

Present year '2026'; birth year '2000'.

STEP TRACE

`calculate_age(2026,2000)` returns 26; main formats it in the sentence.

EXPECTED OUTPUT / RETURN

'You are 26 years old.'

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\2nd_Belt\dojo.py; line numbers refer to the original file.
No source was modified.

```
001 | # Question: Solve the given Dojo challenge using the specified logic.
002 | # Add your solution here.
003 |
004 | def calculate_age(present_year, birth_year):
005 |     age = present_year - birth_year
006 |     return age
007 | def main():
008 |     present_year = int(input("Enter the present year: "))
009 |     birth_year = int(input("Enter your birth year: "))
010 |     age = calculate_age(present_year, birth_year)
011 |     print(f"You are {age} years old.")
012 | if __name__ == "__main__":
013 |     main()
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
