

DRY-RUN GUIDE | index_largest_number.py
Source: Python\2nd_Belt\index_largest_number.py

CORE BEHAVIOR

Scans values for the maximum; index variant also retains the position of that value.

REPRESENTATIVE INPUT

'[4,9,2,9]'.

STEP TRACE

Max changes from 4 to 9 at index 1; later values do not exceed it.

EXPECTED OUTPUT / RETURN

Maximum 9; first index 1 (check source for zero/one-based output).

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\2nd_Belt\index_largest_number.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Find the index of the largest number in the list.  
002 | # Add your solution here.  
003 |  
004 | arr = list(map(int, input().split()))  
005 | lar_no = arr[0]  
006 | for i in range(0, len(arr)):  
007 |     if arr[i] > lar_no:  
008 |         lar_no = arr[i]  
009 | print(arr.index(lar_no))
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
