

DRY-RUN GUIDE | lower_upper.py
Source: Python\2nd_Belt\lower_upper.py

CORE BEHAVIOR

Despite the filename/comment, the executable code inserts spaces at lowercase-to-uppercase transitions (camel-case word separation). It does not convert case.

REPRESENTATIVE INPUT

'helloWorld'.

STEP TRACE

Copy 'hello'; before W, previous char is lowercase and W uppercase, so append a space;
copy 'World'.

EXPECTED OUTPUT / RETURN

'hello World'

ACTUAL SOURCE EXCERPT

Verbatim excerpt; line numbers refer to the original source, which was not modified.

```
001 | # Question: Convert text to uppercase and lowercase as required by the task.
002 | # Add your solution here.
003 |
004 | s = input()
005 |
006 | result = []
007 |
008 | for i in range(len(s)):
009 |     if i > 0 and s[i].isupper() and s[i-1].islower():
010 |         result.append(" ")
011 |
012 |     result.append(s[i])
013 |
014 | print("".join(result))
```

DRY-RUN NOTE

Trace describes actual source behavior, including errors where applicable.
