

DRY-RUN GUIDE | two_pointers_arr2.py

Source: Python\3rd_Belt\two_pointers_arr2.py

CORE BEHAVIOR

Uses two indices to traverse an array, moving one or both based on the comparison shown in the source.

REPRESENTATIVE INPUT

Sorted values [1,2,4,7], target 6 (pair-sum example).

STEP TRACE

(1,7)=8, move right pointer; (1,4)=5, move left; (2,4)=6, match.

EXPECTED OUTPUT / RETURN

Pair (2,4); operation/output depends on this particular source.

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\3rd_Belt\two_pointers_arr2.py; line numbers refer to the original file. No source was modified.

```
001 | # Question: Use the two-pointer technique to solve the array problem.
```

```
002 | # Add your solution here.
```

```
003 |
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
