

DRY-RUN GUIDE | ss232p.py

Source: Python\3rd_Belt for practice\ss232p.py

CORE BEHAVIOR

Intended as run-length compression, but the loop iterates over characters and then uses each character as an index (`s[i]`). For non-empty input, this raises `TypeError` before producing a result.

REPRESENTATIVE INPUT

`'aab'`.

STEP TRACE

First loop value `i='a'`; evaluating `s[i]` uses a string as a slice/index, so execution stops. The empty-string case returns early.

EXPECTED OUTPUT / RETURN

For `'aab'`: `TypeError` and no printed result. For empty input: returns and prints an empty string.

ACTUAL SOURCE EXCERPT

Verbatim excerpt; line numbers refer to the original source, which was not modified.

```
001 | # Question: Solve the given array/string challenge using the required logic.
002 | # Add your solution here.
003 |
004 | a=input()
005 | b=input()
006 | c = False
007 | for i in a:
008 |     if a[i:len(b)]==b:
009 |         print(a[:i]+a[i+len(b):])
010 |         c=True
011 |         break
012 | if not c:
013 |     print(a)
```

DRY-RUN NOTE

Trace describes actual source behavior, including errors where applicable.
