

DRY-RUN GUIDE | string.py

Source: Python\3rd_Belt for practice\string.py

CORE BEHAVIOR

Inserts a space at lowercase-to-uppercase boundaries to separate camel-cased words.

REPRESENTATIVE INPUT

'helloWorld'.

STEP TRACE

The boundary before W meets both conditions; append a space, then copy the remaining characters.

EXPECTED OUTPUT / RETURN

'hello World'

ACTUAL SOURCE EXCERPT

Verbatim excerpt; line numbers refer to the original source, which was not modified.

```
001 | # Question: Process the input string according to the required string operation.
002 | # Add your solution here.
003 |
004 | s = input()
005 | result = []
006 |
007 | for i in range(len(s)):
008 |     if i > 0 and s[i].isupper() and s[i-1].islower():
009 |         result.append(" ")
010 |         result.append(s[i])
011 |
012 | print("".join(result))
013 |
```

DRY-RUN NOTE

Trace describes actual source behavior, including errors where applicable.
