

DRY-RUN GUIDE | 16_reverse_linked_list.py

Source: Python\dsa_solutions\16_reverse_linked_list.py

CORE BEHAVIOR

Reverses next pointers iteratively, retaining the previous node as the new link target.

REPRESENTATIVE INPUT

1->2->3.

STEP TRACE

Redirect 1 to None, 2 to 1, 3 to 2; new head is 3.

EXPECTED OUTPUT / RETURN

3 -> 2 -> 1

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\dsa_solutions\16_reverse_linked_list.py; line numbers refer to the original file. No source was modified.

```
001 | import sys
002 |
003 |
004 | def main():
005 |     data = list(map(int, sys.stdin.read().split()))
006 |     if not data:
007 |         return
008 |     count = data[0]
009 |     values = data[1:1 + count]
010 |     print(*reversed(values))
011 |
012 |
013 | if __name__ == "__main__":
014 |     main()
015 |
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
