

DRY-RUN GUIDE | 21_partition_linked_list.py
Source: Python\dsa_solutions\21_partition_linked_list.py

CORE BEHAVIOR

Groups linked-list nodes around a pivot according to the source's partition logic.

REPRESENTATIVE INPUT

1->4->3->2->5->2, pivot=3.

STEP TRACE

Values below 3 form 1,2,2; remaining group 4,3,5; connect groups if stable partitioning is used.

EXPECTED OUTPUT / RETURN

1 -> 2 -> 2 -> 4 -> 3 -> 5

ACTUAL SOURCE EXCERPT

Verbatim excerpt from Python\dsa_solutions\21_partition_linked_list.py; line numbers refer to the original file. No source was modified.

```
001 | import sys
002 |
003 |
004 | def main():
005 |     data = list(map(int, sys.stdin.read().split()))
006 |     if not data:
007 |         return
008 |     count = data[0]
009 |     values = data[1:1 + count]
010 |     pivot = data[1 + count]
011 |     partitioned = [value for value in values if value < pivot]
012 |     partitioned.extend(value for value in values if value >= pivot)
013 |     print(*partitioned)
014 |
015 |
016 | if __name__ == "__main__":
017 |     main()
018 |
```

DRY-RUN NOTE

Values are representative. For function-only modules the guide uses an illustrative direct call and explains its return; quirks/errors describe actual behavior.
