

DRY-RUN GUIDE | 4th_letter_reader.java
Source: java\1st_belt\4th_letter_reader.java

CORE BEHAVIOR

Reads a full line and uses zero-based charAt(3), which selects the fourth character.
Input shorter than four characters throws an index error.

REPRESENTATIVE INPUT / CALL

Input: 'Austin'.

STEP TRACE

Indices: A=0, u=1, s=2, t=3; charAt(3) returns t.

EXPECTED OUTPUT / RETURN

't'

ACTUAL SOURCE EXCERPT

Verbatim lines from the source; long lines wrap. Source files were not modified.

002 | Challenge #8
003 | Let's learn how to find a specific letter in a name using a computer program.
004 |
005 | Your Task:
006 | Imagine you're counting the letters in a name from left to right, starting with 0.
007 | Your job is to find the letter that comes at the 4th spot. Here's how you can do it:
008 |
009 | 1. Ask for the Name: First, you'll ask the person to type in a name.
010 | 2. Find the Letter: Once you have the name, you'll use your magic tool to find the
    | letter at the 4th spot.
011 | 3. Show the Letter: Finally, you'll show the letter you found to the person.
012 |
013 | Example 1:
014 | Input: Austin
015 | Output: t
016 | */
017 |
018 | import java.io.*;
019 | import java.util.*;
020 |
021 | public class Solution {
022 |
023 |     public static void main(String[] args) {
024 |         /* Enter your code here. Read input from STDIN. Print output to STDOUT. Your
    | class should be named Solution. */
025 |         Scanner sc = new Scanner(System.in);
026 |         String n = sc.nextLine();
027 |         char x = n.charAt(3);
028 |         System.out.println(x);
029 |     }
030 | }
031 |
```
